

OKRA ENERGY GROUP

Okra Energy at a glance

Small-scale LNG, delivered where pipelines don't go: liquefaction, virtual-pipeline logistics, regasification and power for industry across the Americas.

30,000

Gallons of LNG per day at Colán, Peru

180,000

Gallons per day planned at McIntosh, Alabama

350 MW

Power-ready AI data center site in Central America

GROUP COMPANIES

COMPANY	COUNTRY	ROLE	STATUS
Pure LNG S.A.C.	Peru	Colán liquefaction plant · 30,000 GPD · two trains	● Producing
Okra Energy Alabama	United States	McIntosh liquefaction facility · 180,000 GPD	● In development
LNG Direct Ecuador	Ecuador	LNG import, distribution and operations	● Licensed
LNG Direct Guatemala	Guatemala	LNG import and operations, power and energy infrastructure	● Licensed
LNG Direct Canada	Canada	LNG import and distribution	● Licensed
Obsidiana Capital, with LNG Direct	Central America	350 MW power-ready hyperscale AI data center site	● In development

WHAT WE SELL

LNG supply
 LNG plants: sale or lease
 Regasification and storage
 ISO container fleet
 Power generation
 Power-ready AI data center sites

SUPPLY AND STANDARDS

10-year gas supply agreement, Peru
 25-year gas supply agreement, Alabama
 Colán plant designed to NFPA 59A

About Okra Energy

Okra Energy builds and operates small-scale LNG plants and the virtual pipeline behind them, bringing natural gas to industry and communities beyond the reach of pipelines. Its goal is a smarter, higher-performance LNG world. Through its group companies (Pure LNG in Peru, Okra Energy Alabama in the United States and LNG Direct in Ecuador, Guatemala and Canada) it supplies LNG, regasification and storage, ISO container logistics and power generation across the Americas, and develops power-ready sites for AI data centers. Its founders have sold technology to companies including Microsoft, Google and Tumblr. More at okraenergy.com.

About Pure LNG

Pure LNG S.A.C. produces LNG at Tablazo Colán in Piura, the site where Okra Energy, LLC built Peru's first small-scale LNG plant in 2018. Its two-train plant has a nameplate capacity of 30,000 gallons of LNG per day and delivers LNG by ISO container to industrial customers beyond the gas network, mainly in Ecuador. Pure LNG designs, engineers and builds small-scale LNG plants as the EPC contractor, then operates them or sells or leases them to customers, and manages the plants it runs with Ask Alex, an AI operational intelligence system. Pure LNG is part of the Okra Energy group.
